# **OneLogin Multi-Factor Authentication Setup Instructions**

### **Initial Navigation**

- 1. Navigate to https://daltonstate.onelogin.com/
- 2. Enter your Dalton State username on the first screen, your password on the second screen, and, should it be applicable, your multifactor authentication method on the third screen.
  - a. If this is your first time logging in to OneLogin, you will be asked to set up your multifactor authentication method: OneLogin Security Questions, OneLogin Protect, Yubikey, Google Authenticator, or VIP Access.
    - i. For OneLogin Protect, Google Authenticator, or VIP Access, install those apps onto your smartphone or tablet.
    - ii. For Yubikey, purchase a Yubikey and have it ready to insert into your computer, smartphone, or tablet.
    - iii. For OneLogin Security Questions, configure three security questions. Two will be chosen randomly for you to answer when you log in.
    - iv. Regardless of your selection, the first time you log in to OneLogin, you will be required to set up three security questions as a fallback method for your MFA should you not have access to your phone or YubiKey.
- 3. Navigate to the OneLogin profile page if you did not load into it.
  - a. If you see tiles including Office 365, OneUSGConnect, or ePro instead of a header with your name, you have loaded into the OneLogin Application Portal.
    - i. Navigate to your name in the upper right of the page.
    - ii. Click Profile.
- 4. Click on the plus (+) icon to the right of the **2-Factor Authentication** header to bring up the add **2-factor method** menu.
- 5. Change the **Choose Vendor** drop down menu to one of the below options:

## **OneLogin Protect**

- 1. Scan the generated barcode using the OneLogin Protect app on your phone
  - a. If you cannot scan the barcode, change the Pairing Method radio button to Manual Entry
  - b. Choose **Enter code instead** on the app.
  - c. Enter the generated code, including the hyphen.
- 2. The device will be registered when the green checkmark appears on OneLogin and the app.
  - a. Your smartphone will need to have a passcode configured on it to receive notifications and codes.
- 3. To login using OneLogin Protect, you will respond to Approve/Deny notifications on your registered device.

### YubiKey

- 1. Insert your YubiKey into the USB port of your computer.
  - a. For NFC compatible smartphones and tablets, tap the YubiKey to the NFC reader
  - b. For non-NFC compatible smartphones and tablets, plug in the YubiKey 5Ci compatible with lightning and USB-C ports into your phone or tablet
- 2. Tap the sensor button on the top of the YubiKey.
- 3. The device will be registered when the YubiKey unique code populates in the YubiKey ID field.

#### **Google Authenticator**

- 1. Scan the generated barcode using the Google Authenticator app on your phone
  - a. If you cannot scan the barcode, choose Manual Entry instead of Scan Barcode on the app.
  - b. Enter the generated secret key.
- 2. The device will be registered when the 6-digit code titled OneLogin appears under your list of accounts on the app.
- 3. Type the 6-digit security code on your Google Authenticator app into the **Security Code** field beneath the barcode.
- 4. Click **Continue** to register the device.

#### **VIP Access**

- 1. Type your full **Credential ID** which appears at the top of the app into the **Credential ID** field.
- 2. Type the first security code you see into the **OTP1** field.
- 3. Type the next consecutive code you see into the **OTP2** field.
- 4. Click **Continue** to register the device.

# **OneLogin Security Questions**

- 1. To change your security questions and their answers, click the pencil icon to the right of the **Security Question** Header
- 2. Make any necessary changes, then click Save.
